

# Adding a carousel to a template

Last Modified on 31/05/2021 2:52 pm IST

## Adding a carousel to a template

In this feature, you can:

- Add a carousel to a template

To select a carousel type, do the following:

1. Login to your WebStore Manager.
2. Go to **Design & Content > Carousel Builder**.

### Adding a carousel to a template

- To add a carousel to a template, simply copy the code given into a template of your choice.
  - To use this carousel copy the following code into a template  

```
{includeCarousel("newproduct")}
```
- Nothing else is required. The js that triggers the carousel is managed by the WebSell platform.
- This call will also pass the carousel any options that are associated with that carousel.

### NitroScript format

- The format is  

```
{includeCarousel("CAROUSEL_NAME")}
```
- Where CAROUSEL\_NAME is the name of the carousel you entered when you created a carousel in the WSM carousel builder. It is not the title of the carousel you entered in the carousel options tab.

**Note:** The name needs a set of double quotes at the start and end. Single quotes won't do.

### nsIf:CAROUSEL\_NAME

- Certain built-in carousels have WSM options which determines if they are to display or not. These therefore have nsIf:CAROUSEL\_NAME tags for use on the templates.
- nsIf:NewProductPanelEnabled – New Product Panel  
nsIf:PromotioPanelEnabled – Promotion Panel

Warning: If you are not comfortable with editing HTML and do not have experience with web scripting languages, it is advisable to seek NitroSell's assistance with changes to these templates.
