

# Temporarily disable your webstore checkout

Last Modified on 15/07/2025 1:33 pm IST

If you need to pause order processing without taking your entire store offline, WSM provides a simple option to disable the checkout functionality.

By enabling the **Disable WebStore Checkout** setting in WSM, customers will be prevented from placing any orders on your site. This can be especially helpful in situations such as:

- Performing **system maintenance** or updates
- Preparing for a **new product launch**
- Resolving **inventory or fulfillment issues**
- Managing **unexpected downtime** or troubleshooting

When this option is enabled, all other aspects of your WebStore remain visible—products, pages, and content can still be browsed—but customers won't be able to complete purchases until you re-enable the checkout.

## How to Disable WebStore Checkout

### Steps:

1. **Log in to WSM.**
2. Go to **Settings > All Config Options.**
3. Locate and enable **Disable WebStore Checkout.**
4. **Save your changes** at the bottom of the page.

**Description:** Using this option, you can temporarily prevent customers from purchasing from your WebStore, for instance, during system maintenance. [more...](#)
