

# Stripe Elements

Last Modified on 18/11/2025 10:05 am GMT

[Stripe Elements](#) is a powerful suite of customizable UI components designed to optimize your checkout experience. With dynamic payment methods, seamless autofill, and full design control, you can offer your customers a fast, flexible, and polished way to pay.

## P A Y M E N T

The screenshot shows a payment interface with the following elements:

- Payment Method Selection:** Two radio buttons: "Using my PayPal account" (unchecked) and "Using my Credit/Debit Card" (checked).
- Card Method Selection:** A radio button "Card" (checked) is highlighted with a blue border. Other options include "Amazon Pay" and "Revolut Pay".
- Card Number:** Input field containing "1234 1234 1234 1234". To the right is a small icon showing the VISA and Mastercard logos.
- Expiration Date:** Input field "MM / YY" with "MM" and "YY" dropdown arrows.
- Security Code:** Input field "CVC" with a small icon showing a credit card.
- Country:** Input field "United Kingdom" with a dropdown arrow.
- Postal Code:** Input field containing "WS11 1DB".
- Buttons:** A "CONFIRM & PAY NOW" button at the bottom left and a "CONFIRM" button at the bottom right.

## Main features and benefits

### Dynamic Payment Methods

Stripe Elements can dynamically display over 40 supported payment methods based on the shopper's location, currency, and device. These include Klarna, Afterpay/Clearpay, Affirm, Cash App, PayPal, Google Pay, Apple Pay, and others. Methods are automatically configured through Stripe and do not require individual setup.

### Autofill with Link

Link is Stripe's autofill system that stores payment and shipping details for customers. When enabled, returning customers can complete checkout more quickly by reusing their stored information. Link works across all Stripe-enabled sites that support it.

### Complete Customization

Elements can be styled to match the visual design of a website. You can control layout, spacing,

and appearance to create a cohesive user experience within the checkout flow.

## Compatibility

Stripe Elements works with existing Stripe accounts and requires no new credentials or separate onboarding. It uses the current account configuration and inherits existing security and compliance settings.

## On-page error handling

Customers will no longer need to reload the page to verify their payment details. Stripe Elements will dynamically detect errors with payment details before reloading the page, allowing much quicker correcting.

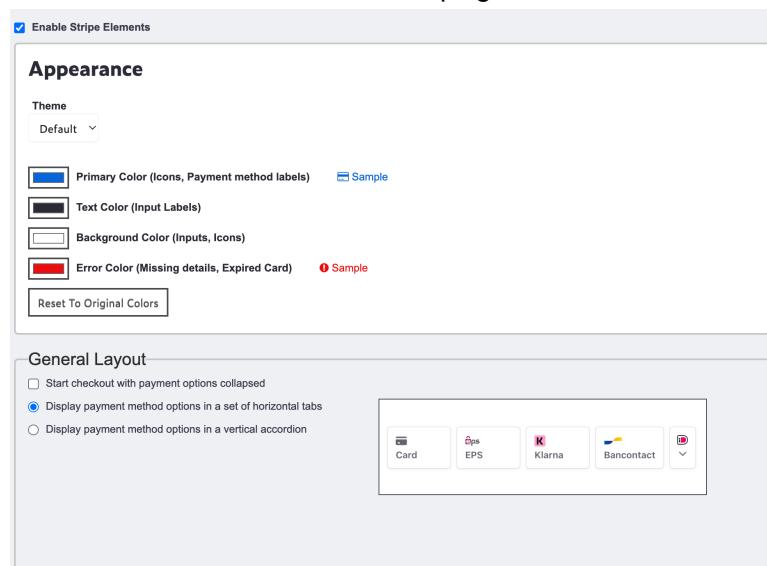

## Refurbished Saved Cards

Stripe Elements allows customers to manage their saved card details during checkout. They can update or remove stored cards directly from the payment form without needing to access a separate account management page.

# How to Enable Stripe Elements in WSM

Steps:

1. Please contact Websell Support to have this option enabled.
2. Once the team confirms it is enabled on the backend, go to WSM under **Orders** and select **Stripe Elements**.
3. Enable the **Enable Stripe Elements** option.
4. Click **Save** at the bottom of the page.

The screenshot shows the configuration interface for Stripe Elements in WSM. At the top, there is a checkbox labeled "Enable Stripe Elements" which is checked. Below this is the "Appearance" section, which includes a "Theme" dropdown set to "Default", and color selection tools for "Primary Color (Icons, Payment method labels)", "Text Color (Input Labels)", "Background Color (Inputs, Icons)", and "Error Color (Missing details, Expired Card)". There is also a "Reset To Original Colors" button. The "General Layout" section contains three radio buttons: "Start checkout with payment options collapsed" (unchecked), "Display payment method options in a set of horizontal tabs" (checked), and "Display payment method options in a vertical accordion" (unchecked). Below these options is a preview window showing a horizontal tab bar with icons for Card, EPS, Klarna, and Bancontact.

The settings allow you to customize the layout and style. To view and manage available payment methods, visit your [Stripe Dashboard](#) and enable or disable options as needed.

---

If the integration is working but certain payment methods are not available, it may be due to the order being ineligible (e.g., the order amount is too low or the customer is located in a different country), or your Stripe account itself may not be eligible. For any questions regarding this, we recommend contacting Stripe support directly.
