With the Websell integration with Business Central 365, you can display downloadable files such as product spec sheets, manuals, or certificates directly on your product pages. These files are managed in Business Central and automatically synced to your webstore.

How it works

Attachments added to an item in Business Central are added via the Websell sync. During the synchronization process, all attachments for the item are written into a custom field on the product. Your product page template then reads this field and renders a list of download links. Customers can click on any of these links to open the file in a new browser tab.

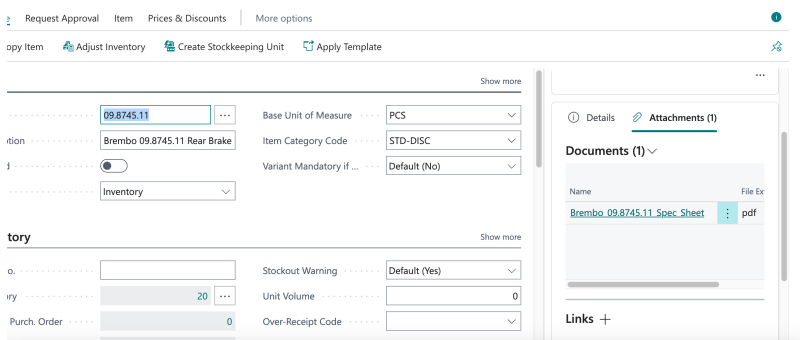

How to set up

1. Please contact WebSell Support to enable the feature in Webstore Manager.

2. Add Attachments in Business Central:

- Go to **Items** in Business Central.
- Open the relevant item.

09.8745.11 · Brembo 09.8745.11 Rear Brake Disc

- In the right-hand panel (where the image section appears), switch to the **Attachments** tab.
- Upload the document(s) you want to display on product pages (e.g. PDF spec sheets, manuals).
